LADDOMAT 11-Series
Thermal charging and anti-condensation unit

Laddomat 11 is easy to install and ensures perfect charging of the tank.
Thanks to efficient fan water control, Laddomat 11 can have a higher opening temperature at higher boiler output temperatures in cold climate conditions. The regulation set in Laddomat 11 200 is the same as in the Laddomat 11 20.

Laddomat 11 solves the return temperature in the bottom of the boiler. This prevents corrosion and air formation, which in turn reduces the efficiency of the boiler.

Laddomat 11 enables the boiler to start working even pressure in a easy and fast way. This improves the boiler efficiency.

Laddomat 11 charges the storage tank by means of a fan that will allow a 200% increase in the air charge tank's temperature for an effective water circulation before system. With Laddomat 11 saving is gained.

During the first part of firing, Laddomat 11 charges the storage tank with fresh air to create thermal mass, which covers the boiler part components.

Simple programming. Laddomat 11 Thermal valve with maximum output up to 600 kW.

Laddomat 11 is supplied with hot valves to facilitate the working without having to shut the system.
2000 installation sheet is attached to the Laddomat 11 200.

Termoventiler

Thank you all for a fantastic 2017!

We want to thank all of our customers for a good cooperation during this year. This year we support The Swedish Childhood Cancer Foundation with a Christmas gift and support their important work in the fight against cancer.

**We support the Swedish
Childhood Cancer Foundation 2017**
